

Flower refrigerators

SCh-AK / SCh-AKM

rapa.pl/en

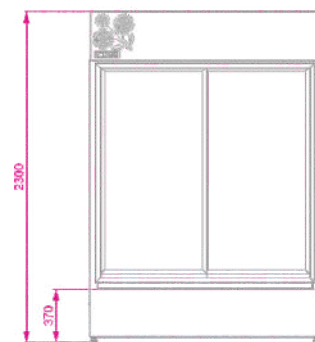

CREATE A PARADISE FOR FLOWERS!

Are you focused on delivering beauty of the highest quality?
Your floral arrangements are unique, but they are tightly packed on shelves are invisible and fade quickly?

We have a device for you that will extend their life and help display properly your floristic works of art.

The flower refrigerator is a solution designed for the professionals. It creates the best climate for flowers, so you can focus your energy on what is most important, your compositions.

We used the **gravity cooling**, which does not dry the air. And due to the perfect temperature, you change the water less often.

You will take care of the environment, because the interior of the device is cooled with **R-290 refrigerant**.

A flower refrigeration **platform** can make it more comfortable to use - both placing as well as removing flowers, and also cleaning the device.

You will highlight your professionalism, because the device is decorated with **elegant floral pattern**.

You can choose the appropriate temperature easily, because we applied an **electronic temperature controller** with clear display.

Choose **interior mirror** instead of panoramic glass and/or side windows and create an effect of abundance.

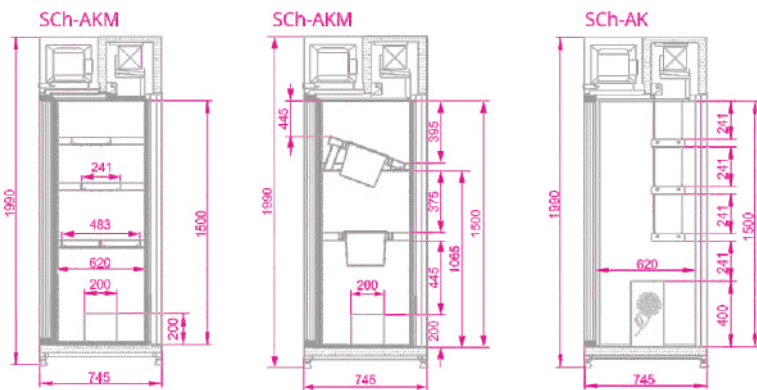

Choosing a AKM model with the housing modification and **levels of regulated shelves** will give you even more display options.

You will easily insert flowers into the device, because we have installed **sliding doors**, which you can block for the time of loading.

You will gain durable and strong construction, because the device is made of **grinded stainless steel**, that we can paint for you.

TECHNICAL DATA

width	120,5; 140,5; 160,5; 180,5; 200,5; 220,5 cm
depth	74,5 cm
height	199 cm
width of the exposition	110; 130; 150; 170; 190; 210 cm
depth of the exposition	62 cm
height of the exposition	150 cm
height of stools	20; 40; 60 cm
refrigerant (HC)	R-290
rated voltage	230 V~ / 50 Hz
defrosting	automatic
More information:	

You will save time because we have built in the **automatic condensate evaporation system**, that you don't have to empty.

You will give your flowers more space, as you can both place them in vases and hang the finished compositions on the crossbar or display them on additional **hanging shelves**.

You will show all the colours in your compositions, due to **energy-saving LED lighting**.

You can set it up easily even in the room with uneven floor, because we used **adjustable legs**.

Due to the **panoramic, tempered glass**, you will provide perfect view from all sides.

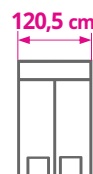

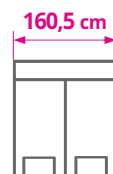

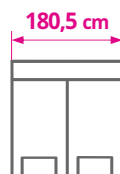

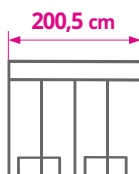

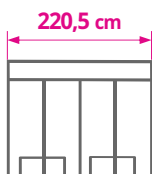

You will keep it clean easily, because the bottom of the device and the platforms are made of high quality stainless steel in "canvas" texture. For your convenience **platforms** are available in a choice of **3 different heights**.

If you choose to install **wheels with adjustable feet**, you can easily turn the flower refrigerator at any time and conveniently move it to wherever you want.

Size for every interior.

You will gain extra space, because we have prepared a refrigerator in **6 different sizes**

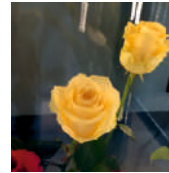

UP TO 6 TIMES LONGER LASTING FRESHNESS OF FLOWERS, which we confirmed in durability test.

We tested this. We divided 3 flower species into 2 groups. The first one we placed in our flower refrigerator, the other we kept at room temperature. Flowers that have been stored in the refrigerator, looked fresh and healthy for up to 18 days after purchase.

In the photos, we showed how the flowers in the flower refrigerator were changing during the test. Their lives were extended up to 6 times compared to flowers kept outside the refrigerator, which after 5 days withered and were unfit for display and sale. Results will vary depending on the species.

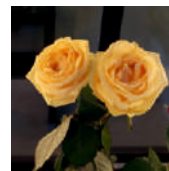

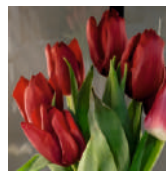

Day 01

Day 08

Day 18

The flowers tested were from the same supplier, from a single container pack. The water in the vases was changed regularly and at the same frequency for each group.
